

No P.O Box Checkout

Introduction:

PO Boxes are considered as one of the least secure methods that are giving a lot of options for fraud and use of illegal goods and services. For this reason, a lot of web-stores may need to exclude this method from the list of available shipping options.

The extension updates the Magento checkout fields to prevent shipping to a PO Box. It also provides error messaging to inform customers that they must enter a valid shipping address before proceeding through checkout.

This is great for sites that want to truly restrict customers from entering or processing orders that contain a P.O. Box address.

Configuration:

Login to Admin: Admin → Stores → Configuration

In the panel on the left, click Sales → SWT → PO Box

General Configuration

Admin Configuration

Admin > Store > Configuration > SWT > PO Box

| | | |
|--|--|---|
| Enabled [website] | Yes | ▼ |
| | disable P.O. Boxes from being submitted in the address field on checkout | |
| Only for shipping address [store view] | Yes | ▼ |
| | If disabled then PO Box will be restricted for all customer addresses | |
| Disable for Customer Groups [store view] | 222,333,444 | |
| | Add customer group IDs by Comma-separated list that will be ignored in checkout. | |

Module general settings include the following options:

- Module Enable — switch the module on/off;
- Disable for Customer Groups: enter the list of IDs of customer groups that should be ignored by the module. Customers that belong to the specified groups will be able to use PO boxes as their shipping and billing addresses.

General Configuration

| | | |
|--|--|---|
| Enabled [website] | Yes | ▼ |
| | disable P.O. Boxes from being submitted in the address field on checkout | |
| Only for shipping address [store view] | Yes | ▼ |
| | If disabled then PO Box will be restricted for all customer addresses | |
| Disable for Customer Groups [store view] | 222,333,444 | |
| | Add customer group IDs by Comma-separated list that will be ignored in checkout. | |

Disable PO Box for specific customer group in shipping and billing address on checkout

- Only for Shipping Address: if shipping and billing addresses are two separate addresses, this option allows you restrict access only for shipping address, thus, allowing PO box to be used as the billing address. If you select “No” — No PO Box at Checkout Extension will be disabled for both addresses.

General Configuration

Enabled [website] Yes
disable P.O. Boxes from being submitted in the address field on checkout

Only for shipping address [store view] Yes
If disabled then PO Box will be restricted for all customer addresses

Disable for Customer Groups [store view] 222,333,444
Add customer group IDs by Comma-separated list that will be ignored in checkout.

PO box implements for only shipping address or both billing/shipping address

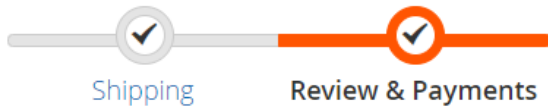

Once you are ready with the configurations, click the Save Config button.

After the changes, clear the cache.

Navigate to System → Tools → Cache Management. Mark the Page Cache: Full Page Caching option, then at the top dropdown menu select Refresh and click Submit.

Once the extension is enabled, customer will no longer be able to enter any PO Box Address on the checkout.

The module will automatically validate the billing and shipping details and will show a warning message if any PO Box related address has been entered by the customer.

Payment Method

Check / Money order

✘ Please check the shipping address information. Field "street" is not valid. It is not allowed to enter a PO Box in the shipping address.

My billing and shipping address are the same

Po Box Po Box

PO Box

Po Box, New York 10001

United States

97878787877

If customer tries to set PO box in shipping or billing address then it will be showing this error message.
