

# Pre Order

## Introduction

The Pre-Order extension allow online stores to sell upcoming or out-of-stock products before they are available in inventory.

It is a strategic approach used to gauge market demand, and build anticipation ahead of a product. By Default, customers can not add out of stock products in the shopping cart and it means merchants lose potential sales so our pre order extension allow customers to place an order for any products which is settled "Pre-Order" from the backend.
